Fibraplex launches the FPX Banner Stand

Fibraplex Corporation, a manufacturer of carbon fiber products recently launched a unique free standing banner stand applicable to store, product and event displays. The slim looking frame of the FPX Banner Stand is cunningly sturdy, as the fiberglass support poles act as a counterbalance keeping weight behind the banner. Another foot pole at the base of the stand keeps the stand upright. Wooden dowel header and footer poles keep the banner properly tensioned.

The FPX Banner Stand can easily be assembled and disassembled in less than two minutes and stores in a compact container. At less than 2 lbs. the FPX Banner Stand is quite light for shipping and handling and will work with most standard banner materials. The FPX will also support traditional clip on lighting mounts.

Though Fibraplex is often known for it's Fibrapole tent poles and carbon fiber cable, designing products and materials for the display, trade show, art and stage industry is not new. Designers find the Fibrapole 292 ideal for lightweight display structures and have used them in sculptures, stage designs, and trade show displays. Fibraplex cables have a high tensile strength and small diameter and can be used to suspend objects.

FPX Banner Stands are available in standard 2 ft. x 6 ft. and 3 ft. x 6 ft models and can also be customized to additional sizes. The FPX Banner Stands are available through the Fibraplex website, www.fibraplex.com or by calling 931-243-6915.

About Fibraplex

Fibraplex Corp is a privately owned carbon fiber products company that produces materials for industrial and recreational markets. Its main products are carbon cables and ropes and also carbon fiber tent poles. Its growth strategies are based on developing technologically advanced materials for specialty industrial applications, including marine, drilling, and rigging.
